

John Deere Spreader Advantages

Easy to load from the front to rear—only thirty-six inches to top of box.
High Drive Wheels lighten the draft and furnish extra traction.
Simple beater drive—gears run in oil in dust-proof case.
No clutches—no chains—few adjustments.
Patented Revolving Rake prevents bunching or choking—uniform spreading assured.
Patented apron drive prevents racing of apron under all conditions—does not act as a brake.
Easy to understand and operate—only two levers.
Turns in its own length.

THURSDAY, AUGUST 12, 1926.

S. G. TOBIN, M. P. ON OUR PROBLEMS

(Continued.)

From the Chairman of the Harbours Board—Vancouver, dated March 17th, 1926.

Your letter reached me to-day, and I am glad to place all the information at your disposal in the matter. At Milk River 2,930 bushels were purchased on November 20 last from the same bin and from the same grower and thrashed at the same time and loaded into the two cars through the same elevator together, being purchased at 2.75 per bushel. One car No. 14340 was sent west and the other car No. 14339 was sent east. The grading on the east bound car at Winnipeg was 3 Northern 2 1-2 per cent dockage, while the west bound car was graded Damp 2 Northern 2 per cent dockage, with net return of east car of \$1.41 per bushel after paying all expenses, sold on January 3, while at Vancouver the net return was \$1.47 1/10 by sale on January 5, the latter figure including the screenings sale.

Here were two cars taken from the same bin, one of which was sent west and the other east; and while I am not imputing any wrong motives I am trying to show that it is not humanly possible under the present system to grade properly. A small difference of one per cent on 400,000 bushels would run into millions of dollars; five per cent on 400,000, 2,000,000 bushels at one dollar a bushel would be \$20,000,000 and one per cent would be one-fifth of that. Further from same letter:

At Fort Saskatchewan a purchase on December 16th of 2,730 bushels No. 4 straight, handled in a similar manner and purchased under exactly the same conditions, car No. 81346 was moved west and car No. 81345 was moved east. The east bound car was graded 3 Northern 1 per cent dockage and the west bound car was graded No. 4 with 1 1/2 per cent dockage. The east bound car was sold in Winnipeg January 6 with a net return of \$1.59 4/10 per bushel, the west bound car was sold in Vancouver January 8 with a net return of \$1.59 4/10 per bushel, the Vancouver sale price including the screenings.

With such results from such tests how can you expect a uniform grading at the thousands of elevators? In my district there are upwards of 30 elevators, and while I believe that those who handle the grain are honest I am perfectly well satisfied that they cannot grade the grain properly when they take just a handful, pronounce it damp or whatever and state the price there and then. This is not satisfactory, and there must be with-in the genius of the Canadian people, who can raise the best grain in the world, some means of getting at a more scientific method of grading grain that the system we have at present. Let me now read a few extracts from the report of the Royal Grain Inquiry Commission. It may be said that this is not worth while inasmuch as the farmers know how to grade grain, but I do not think that many farmers have ever read the specifications in regard to grading. The following has reference to the grades in the report of the royal commission 1924:

As to the specifications, it was pointed out that the definitions of the statutory grades in the Grain Act, section 107, were not clear and that they should be defined so as to make them easily understood by all who have to do with them, farmers, country buyers, the inspectors and the traders generally. As an example, take the definition of No. 1 northern wheat, which reads as follows: No. 1 Manitoba northern wheat should be sound and well cleaned, weighing not less than 60 pounds to the bushel, and shall be composed of 80 per cent of hard Red Fife wheat. What is "sound"? Is bran frosted wheat sound? Is slightly bleached wheat sound? Is wheat that has just started to sprout sound? And so the questions might be multiplied. Sound should be clearly defined for the purpose of the Act. And again, what is the meaning of "well cleaned"? How clean shall wheat be to be "well cleaned"? Does it mean that it shall be free from all admixtures of whatever kind, and fit to go to the rolls in the mill? Or is it to be only commercially clean, and, if so, what degree of cleanliness shall it be? Or does well cleaned mean that it shall be free or nearly free from other grains such as barley, rye and oats? And what may the 40 per cent other than the 60 per cent of hard Red Fife wheat consist of? May it be soft wheats, white wheats, other varieties of wheats, durum wheats, or what must it be? And what degree of moisture may it contain to be fit for warehousing?

The same complaint is made in regard to the other grades. This may be rather tedious to listen to, but I want to show how difficult it is to grade wheat with any reasonable degree of satisfaction to the farmers. The report goes on to say:

The actual work of grading was complained against. The feeling was expressed quite commonly that the grading was done to favour some one other than the producers of the grain. It was felt that the grading was too severe, especially on bleached, sprouted and otherwise slightly damaged wheat. It was not easy for the producer to understand why certain causes should produce deterioration, and the grading officials were the ones who had to take the blame.

There was no charge of dishonesty, but the thought expressed was that the grading was done to the grain exchange and their remoteness from the grower affected their judgment, to the advantage of the buyers of grain.

The moisture content of grain was a subject that brought forth a good deal of criticism, especially in the northern part of the grain belt; in connection with both wheat and oats. It was felt that the moisture limitations were too low and too rigid, and some lack of confidence in the testing for moisture was expressed. Emphasis was laid upon the matter of having this and other questions in respect to the condition and milling qualities of grain made the subjects of thorough scientific investigation, in order to enable those in charge to establish, if possible, a system of grading, that will more nearly meet the conditions of grain production and marketing over so large an area as the three prairie provinces. Protein content and quality of gluten, moisture determination and moisture content for safe warehousing bleached wheat and wheat damaged by disease and frost were specially mentioned subjects for investigation. Evidence showed that country elevator operators grade high and low heavily, or grade low and dock light according as they require to use these devices for winning the favor of a customer.

I shall not quote further from the report, but I would ask hon. gentlemen to study Bulletin No. 97 issued by the Department of Agriculture, General division, entitled "Remarks in regard to Wheat, Flour and Bread" by Charles E. Saunders, B.A., Ph. D., LL.D., Dominion Cerealists, assisted by the late Captain R. W. Nichols, F.R.S., and by P. Russell Cowan, B.S.A.

In this bulletin various subjects are treated, such as the method of milling, baking apparatus and method, giving a description of the way in which baking strength is arrived at, how many tests are made from each sample of flour, and so forth. The bulletin also goes into the matter of strong and weak flour, the variations that occur in the method of making dough, and other equally interesting subjects. Now I come to the part I want to bring to your attention particularly. I desire to show how the grain is handled. There is a belief that dampness destroys the value of the grain, and it will be interesting to follow the experiments that are here outlined. They took five samples. One was the original sample, one was a sample that had been wet for five minutes, another had been damp for ten days, another for twenty days, and the fifth sample had been damp for twenty-seven days. They were all thoroughly dried and then made into bread, and this is the result of the tests. The effects of the moisture in destroying the brightness and richness of colour of the wheat was very marked, the samples kept damp for the longer times, when dried again, having almost the appearance of soft wheats. They did not, however, show any noteworthy decrease in the proportion of bread flour obtained from them. The action of the moisture caused a decided lowering of the weight per bushel in all cases. Allow me to quote further from the bulletin issued by our Department of Agriculture. The later samples showed less water absorption in making dough though the difference in this respect is trivial until No. 249 is reached. That is the sample that was damp for twenty days.

In regard to volume, shape and texture, the bread made from the camp wheats was better the longer they had been exposed to the (supposed) adverse conditions until No. 249 was reached. After this there was a falling-off. The figures for baking strength (which are an attempt to express under one head the average conduct of the flour in all respects) show an unmistakable improvement up to No. 243. The sample, though slightly musty when very damp, showed no mustiness in the bread. Indeed the bread produced from it was distinctly the most attractive except that it had perhaps a somewhat less rich flavour than the bread made from the previous samples. No. 248 was distinctly superior to the original sample and No. 247 slightly so.

No. 248 was the sample that had been damp for ten days, and No. 247 was the sample that had been wet for only five minutes. The bulletin continues:

The conclusion which must be drawn from this series of experiments is that dampness in wheat, although very injurious to its appearance, does not necessarily injure, but under some conditions actually improves the intrinsic value to the baker of the straight grade flour produced from it. Injurious action of the moisture would not do so, however, at higher temperatures than it did in this series of trials, but on the other hand it should be remembered that the amount of moisture present in the wheat in these tests was greater than that usually found in "damp" or "mouldy" wheat. Referring to the second and third series of tests, I find the following: The second and third series of experiments with damp wheat were designed to ascertain the effects produced by repeated wetting and drying, such as might occur when wheat is in stock for several weeks and is exposed to occasional showers.

This should be important to hon. gentlemen. The experiments demonstrated that wheat exposed to the atmosphere did not suffer any loss in bread-making value. We know the tremendous cuts in price that are made in the farmer's grain when it is supposed to be damp or tough, but here we have experiments carried on from year to year that go to show that the deterioration is not altogether what has been supposed, although it may take place in certain measure. I will not at this time delay the House further.

It is a great pleasure, Sir, to a western man, or indeed to any Canadian, to read the Speech from the Throne. It points to true progress. It is in every sense of the word a liberal platform. It has not been challenged by anyone, not even by the right hon. leader of the opposition in his amendment. I believe that the legislative programme it forecasts will help the people generally of this country. True some hon. members are of opinion that there should be a duty on agricultural production to support their argument they instance cur imports from the United States of butter, cheese and flour, but these imports were so insignificant compared to our immense exports of the same products to our neighbors across the line that I am at a loss to understand their desire to forego this profitable business.

I submit, Sir, that if Canada is to progress and become the great country that we believe is her destiny, we must put aside sectionalism and present a united front. The west and the east must cease their petty quarrelling and compose their differences, and in a spirit of harmony work together for a united Canada. I recognize—we all recognize—that the western prairies are a dominant force in the progress of this Dominion. In a measure, Sir, the wheat markets of the world are conditioned by the activities of western Canada. But we do not forget that not so many years ago no wheat was raised west of the Red River, and it is only by a measure of co-operation that have reached our present stage of development. Therefore I say it is essential to our national greatness that we establish those points of contact which will enable all sections to co-operate with every other section in helping forward the development of the country. I repeat, Sir, that I am very pleased to endorse the Speech from the Throne and I believe that it contains one of the most encouraging legislative programmes that has been submitted to parliament in many years.

THE WHEAT POOL AND TRADING IN FUTURES

(Quoted from the Chicago Price Current—Grain Reporter, issue of August 4th, 1926)

The feature of the last day of the month's trading was the heavy deliveries of wheat to the trade by the wheat pool. It is estimated that at least 5,000,000 bush of the total deliveries for the day were from the pool. The pool all the week has been pounding the market and checked any advances by throwing in the stuff in chunks.

This is perfectly legitimate business. The pool is a member of the exchange and entitled to the facilities provided for it as a member. Its operations in futures are on a very large scale.

But the promoters and propagandists responsible for its organization announced that one of the main objects of the pool was to break up the Winnipeg Grain Exchange. It was frequently preached by the farmers' friends that short selling was a crime, the future trading and hedging were unnecessary as far as the pool was concerned, that it was in fact inaugurating a new and enlightened method of marketing. This buncombe was swallowed by a lot of farmers, but not all. From now on the highly paid pool propagandists will find their ingenuity taxed to explain. At that, you can't fool all of the people all of the time.

The Canadian Co-operative Wheat Producers, Ltd. (The Wheat Pool) is in the limelight these days. The public and the pool members have been informed that officials of the company suffered from writers' cramp from spring checks, and how millions of dollars have been distributed among the members of the pool by the interim payment of July 26.

So far members have received \$1.40 a bushel for No. 1 Northern wheat. In a statement issued by pool officials they are led to hope that they may get a little more. The president of the Manitoba pool offers a word of comfort—the pool paid \$1.60 all told last year. He did not depress his clients by telling them that on a whole lot of grades and mixtures there was nothing more coming. However, they know it now that they have their checks.

On the trading floor of the Exchange the feature of the past week has been the heavy selling of wheat futures by "A" and "big interest." Brokers do not like the names of their customers, but traders know where this selling is coming from. This short selling is on the face of it by parties who have the wheat to deliver and mean to deliver it.

As it is, \$1.40 a bushel looks small compared to \$1.55, the average price paid by the trade. It would look smaller should the average price by the end of the crop year be \$1.60 or over.

The general conclusion is that the big interest is more interested in keeping prices down than in any policy for the present.

TO FARMERS
I would like to get in touch with a farmer who owns a quarter section improved farm in this district, who wants more land, and would be willing to turn in his quarter as first payment on my highly improved 480 acre farm. Terms to suit can be arranged on the difference. Call and talk the matter over with me. A. A. Henry, Phone 3204, Lacombe.

with some coffee. He tied a rope about his body and then to a raft. In some manner the raft threw the boy and then ran around the pasture dragging the little fellow for some time. One of the other children saw what was happening and called his mother.

The calf was caught and the injured boy released and taken to the house where he died before his arrival of the doctor.

At the August meeting of the Lacombe W. I. held Wednesday, Aug. 11th, Dr. Henry gave a short talk on "Diphtheria," explaining the method of prevention offered by the Department of Public Health. Before the meeting closed there was some discussion regarding the Bentley Community Hospital. The organization and management was explained by Dr. Henry. Mrs. Frank Thorpe told of what the ladies had done and of some of their plans for the fall.

Born—At the Bentley Community Hospital on 11th and Mrs. Geo. Redden, a daughter.

Mr. and Mrs. D. A. Collette, Hilbert Thorpe and Harry McKean left Thursday on a motor trip to Banff and Lake Louise, they returned on Tuesday and report an enjoyable time with good weather throughout.

H. A. Locke, of Calgary, has opened up a drug store in the premises formerly occupied by J. McQueen. He has a full line of drugs and the store building which has been renovated inside and out, shows a decided improvement.

Mr. and Mrs. Percy Thorpe, Mrs. Chown and son, Edwin, returned from a week's vacation spent in travelling by motor as far as Field and the Yoho Valley.

The Skolar and Frank Thorpe accompanied Tom Jackson to Red Deer last week and took part in the golf tournament. They were all three up and two to go at sundown—only more so and then some, what I mean.

J. M. Fawcett who was pastor of the Methodist church some years ago and is now staying at Brownlow's Landing will occupy the pulpit of the United Church next Sunday evening.

DEATH OF Mrs. R. MOWBRAY
Clara Catherine Cole was born in Illinois on November 12, 1885, passed away at Bentley August 12, 1926, aged 40 years and 9 months.

She came with her parents to the Blindman Valley, in March 1905 and has lived in the community ever since. She was married on March 1, 1910, to Ralph Mowbray to whom two children were born. She leaves beside her sorrowing husband and children, an aged mother and one sister in Bentley, a sister in Illinois, and three brothers.

She has been a patient sufferer for years and at last.

Life's troubles for her are over, and with loved ones at the door.

To cross to the other shore.

Picture show next Saturday night "THE LUCKY DEVIL."

A PRETTY WEDDING
Cennery-Joslin

The marriage took place on Wednesday evening, August 12, at 8 o'clock, of Audrey, daughter of Mr. and Mrs. J. A. Joslin, 9851 90 Avenue, Edmonton, to Mr. Clifton Cennery, son of Mr. and Mrs. H. Cennery, Maclean block, Edmonton, at the home of the bride's parents.

The ceremony was performed by the Rev. M. H. Wilson, beneath a white wedding bell in a bower of green foliage and ferns and pastel shaded sweet peas in the living room.

The bride wore a smart frock of woodlark brown georgette with bodice appliqued in copper satin flowers outlined with gold metallic lace, and applied leaves in deeper shades of copper. She carried an arm bouquet of pale pink roses.

Miss Kathleen Campbell played the wedding music.

The only attendant was little Miss Rhoda Wood, who acted as ring-bearer. Her dainty frock was of orchid crepe de chine with small blue trimmed hat to match. She carried a basket of orchid and pink sweet peas.

Following the ceremony a reception was held at which about forty guests were present. Assisting at

Mr. and Mrs. John Russell, Jr., have returned, having spent their honeymoon in Banff and Turner Valley, and have taken up their residence on Mr. Russell's farm near Joffre.

The "Blue Birds" six-piece orchestra will play for the last time in Joffre hall this season on Tuesday evening, August 24th, at 9:30.

Master Stokes, of Coronation, is the guest of the Smith boys.

The next picture show will be held in Joffre hall Saturday, August 28th, at 8:30 p.m.

Mrs. Campbell returned from Syd Lake Thursday, where she has spent the last two weeks holidaying. Mrs. Cane Boomer and daughter, Miss J. Fisher and Mr. Sherman, arrived home during the past week from Port Haney, B. C.

BENTLEY NEWS
A very sad accident occurred Tuesday evening on the farm of Jens Larsen, two miles north of town. Jimmie, aged eight years, was playing

the two tables were the Misses Laura Joslin, Marion Joslin and Kathleen Campbell. The rooms were effectively decorated with pastel shaded sweet peas.

Among the invited guests were Mr. and Mrs. H. Cennery, Mr. and Mrs. St. W. Joslin, Sr., Mr. and Mrs. H. W. Joslin, Jr., of Lodge Mac and Mrs. M. H. Wilson; Mr. and Mrs. H. A. Thompson; Mr. and Mrs. F. Shears, Lamont; Mr. and Mrs. H. B. Wood; Mr. and Mrs. A. M. Campbell; Lacombe; Mr. and Mrs. D. S. McDougall; Mr. and Mrs. F. R. Sutcliffe; Mr. and Mrs. H. L. Smith; Mrs. May England, Toronto; Mrs. A. Grebe, the Misses Doris Joslin, Belle Snider, Jean Campbell; Messrs. Herbert Joslin, Jr., Gordon Lee, W. Annetta, Brewster, Joslin, Leche; Lawrence Campbell, Lacombe.

Mr. and Mrs. Cennery will reside in the Maclean block. Mr. Cennery is a member of the staff of the Imperial bank, Jasper avenue branch, and the bride was formerly a teacher at Blueberry, near Stony Plain.

CENTRE VALLEY W. I.
An interesting gathering took place at Chapel school on August 5th, 6th and 7th, when the members and friends of the Centre Valley W. I. met for the purpose of receiving instructions in dressmaking.

Mrs. Rummell of Edmonton, was the government demonstrator and through her able and untiring efforts much was accomplished. In spite of uncertain weather, we are able to report an average attendance of twenty-three, and one new member.

Hot dinner was served in the basement of the school, the dining table looking lovely with the large cones of sweet peas. The many flowers which were supplied by members and friends of the W. I. did much towards giving the school a homelike appearance.

The few words of appreciation and thanks on behalf of the W. I. spoken by our president, Mrs. J. A. Pringle, were very ably responded to by Mrs. Rummell.

The Centre Valley W. I. sincerely hopes that Mrs. Rummell will be able to be with us again next summer.

GRAY'S GREY CAPS
End Rheumatism
Calgary, Alta., Nov. 14, 1924.
Mr. F. Boyd,
102 Ninth Avenue West,
Calgary, Alta.

Dear Sir:
It is with pleasure that I testify to the merits of your treatment for Rheumatism. I suffered from this complaint for fifteen years, during which time I tried pretty nearly everything which gave promise of relief.

In 1910 I spent several months at the Hot Springs in Arkansas, but without success of any relief. Five months ago a friend suggested that I try "Gray's Grey Caps" and after taking a box and a half the pain has disappeared and so far I have had no further trouble in this respect. I have no hesitancy in recommending your treatment to other sufferers and sincerely hope that it is as successful relieving them as it was in my case.

Yours truly,
J. G. FORTHE

Chrysler

Standardized Quality

Guarantees Greater Value to the Car Buyer

Large quantity production has long been standardized—quality standardization has been accomplished for the first time in motorcar manufacturing by Walter P. Chrysler.

Merely building several cars is one thing. Building four lines of cars under one name and one management in one unified group of plants on a rigid system of quality standardization is a totally different thing.

Chrysler manufacturing, like Chrysler engineering, is different from ordinary manufacturing—radically and immeasurably different in principle and practice.

50, 60, 70, Imperial 80—These car numbers attached to the name Chrysler mean miles per hour and they mean something vastly more important than that in creating value.

They mean a common basis of quality for all four lines of cars—a rigid system of close measurement and fine manufacturing applied alike to each and

every one of the four lines—a common source of engineering skill—a division of overhead and operating costs—a combination of buying resources—a magnificent system of special machines and special processes devised to insure invariable accuracy in the manufacture of all four lines of cars—a positive protective process of guaranteeing the owner exactly the same basic quality no matter what price he pays or which Chrysler car he buys.

Certainty of unsurpassed performance is thus built into every Chrysler car—no matter what its price classification.

The Chrysler plan makes possible greater value for the investment than has heretofore been dreamed by the automobile buyer.

At one step it eliminates "purchaser's risk" and makes possible the purchase of either the lowest-priced or the highest-priced Chrysler with the positive assurance that the quality in each is equally unquestionable.

CHRYSLER "60"—Touring Car, \$1510; Roadster, \$1605; Club Coupe, \$1665; Coach, \$1760; Sedan, \$1900.
CHRYSLER "70"—Phantom, \$2035; Coach, \$2135; Roadster, \$2195; Sedan, \$2260; Royal Coupe, \$2470; Brougham, \$2540; Royal Sedan, \$2615; Crown Sedan, \$2760.

P. O. B. Windsor, Ontario (freight only to be added). The above prices include all taxes, license fees and road test fees.

Chrysler Model Numbers Mean Miles Per Hour

The Carnival

The curling rink will be greatly decorated with flags and colorful bunting of purple and white on September 20th, to which, when the Lacombe Lodge of Elks will be playing hosts to the people of Central Alberta to celebrate their second annual harvest carnival. The proceeds to be expended for community welfare, sports programmes, and to assist the Elks' band in getting the rest of their needed equipment. If the big show is a success the Big Brother Elks will add another unit or two to the "Kiddies' Playground," all of which makes the community happier and more congenial to live in.

A real live committee of Elks has been given charge of arranging the big programme for the six nights, and they will have something new every night, from grandstand sit-downs, band concerts, and other twentieth century stunts and stunts, bound to amuse the people who turn out and give their hearty support to this good cause.

Bandmaster Leigh Dunphy and his musicians, numbering fifteen pieces, is busy on a programme of new and up-to-date musical numbers which will be one of the features of the six nights entertainment, and all the music lovers of the district who attended the Sunday night band concert in the Elks' hall last spring will know when they hear the band at the Elks' carnival that they have improved fifty per cent, and they have received lots of compliments of their playing during their trips away this summer at the different fairs.

It is expected that a sale of tickets will be made and several valuable prizes will be given away each night of the carnival to the holders of the lucky numbers. The entire programme is now under construction and will be published within a few days so put the dates on your calendars and arrange your plans to spend the week with the Elks at the curling rink.

MRS. F. H. REED, A.T.C.M.

U. F. A. COLUMN

NEED OF REPLACEMENT OF THE PARTY SYSTEM

(By Wm. Irvine)

The stormy session of the last Parliament ended abruptly in dissolution. From the opening ceremony up to the last hectic moment of desperate wrangling between two leaders of the old parties, the spectacle has been such as to reveal the outstanding weakness of the party system and has amply demonstrated its inadequacy.

The party system has failed to function. Legislation could not be put through the House because the two major parties were more interested in fighting each other for the spoils of office, than they were in providing the legislation necessary to the well-being of the Dominion. In addition to the failure of the party system to function, the customs inquiry has brought to light such corruption as to disprove even the champions of the party system. This tottering and corrupt condition of the party system has resulted in a regrettable instability of government.

It is only about nine months since the last election and here we are plunged into another, merely because neither of the two major parties is willing to help the affairs of government unless one or the other is given absolute autocratic power, and yet when that power is given, it is used to promote and cover up the persons of the nature and magnitude of that which has occupied the attention of the nation during the last session in connection with the Customs scandal.

The present instability of government is due entirely to the party system. The Canadian people are being harassed and put to the unnecessary expenditure of another election because of the corruption and inefficiency of that system. Let it be borne in mind that it is this system, and none other, that has failed, and that the mere changing from one party to another at the ballot box will neither clean the corruption of the system, nor make it function. We will be told by the party leaders that one of the issues in the present election is stable government. But they appeal to the people on the party principle which has produced unstable government. What hope of obtaining stable government can there be if the present system is to be continued?

What is meant by a "stable government" in the mouths of party advocates? It means simply numerical strength on the part of the government party sufficient to permit complete domination in all matters of legislation and administration. It is the stable though stable government may be, if it can be attained only by the complete domination of one party (and that party in turn controlled by one class), then the price is too high. It would be far better to put up with the inconvenience of unstable government until such time as party men are compelled to abandon

the conflict for power to adopt the true basis of stable government which is co-operation.

This brings us to the real issue of the election insofar as the U. F. A. is concerned and that is to hold our ground for the establishment in the affairs of government of the co-operative idea rather than the competitive one. The U. F. A. entered Dominion politics in 1921. It did so only as a protest against a political system which had become both corrupt and inefficient, but also in order to project into our political thought the constructive idea of co-operation for political justice, as a substitute for the outworn method of competition for political power.

That the party system needs to be replaced by a better, was never more clearly revealed than at this moment. If the U. F. A. had not been stirred to action prior to this time, surely what has occurred at Ottawa during the last nine months would have given the movement ample justification for putting forward a political effort. Party men will very likely endeavor to blame the groups in the House, which are distinct from the two major parties, for the unstable condition.

It is true, of course, that if we had had stable government under the party system that the Customs corruption would have been hushed up. The U. F. A. members insisted on the investigation and had the power to prevent the Government from covering up its tracks. It is true also that the result of that investigation brought about the downfall of the Government. But who wants a stable government if it rests upon foundations so corrupt? The Canadian people may not desire an election at this time, but it is safe to say that they would rather have the inconvenience of an election than to think of the continuation of a scientific system of corruption under the knowledge of the Government and aided by its officials. So, while the U. F. A. representatives were the means of bringing out the facts in regard to the Customs probe, the downfall of the Government was due entirely to its own corruption, and that downfall and the subsequent immediate collapse of Mr. Meighen's Government, means that the party system as now in practice cannot produce stable government.

Every one will admit that a Government carried on by a party with a large majority will have at least the outward appearance of stability. That party's will, in that case, can be made effective. If this were the only way to secure stable Government we might have to return to it notwithstanding its class legislation, its autocracy and corruption. But this is not the only way nor the best way to attain stable government.

The U. F. A. stands for stability of government. It wants to build that stability on the co-operative basis, and that is our constructive contribution both to the legislative and constitutional questions of the hour. Before co-operation between groups in Parliament is possible, these

groups must be freed from the party practices which deliberately confuse an issue with the Government's right to retain office. The first step forward to be taken in the House of Commons is to adopt the principle that the defeat of a measure introduced by the Government shall not in itself constitute a sufficient reason for the defeat of the Government, but that every Government must be allowed to continue in office to the end of its term unless a direct vote of no confidence be passed. Such a no-confidence vote must be separated from every issue whatsoever except that of the efficiency and integrity of the administration itself. This alteration will provide the means of stable government in a House where there are more than two groups, and will make true co-operation in all matters of legislation possible.

The way of progress for the U. F. A. is clear. If our candidates are not returned, the party system will be returned. If our candidates go back to Ottawa we shall ultimately secure recognition for the co-operative principle and begin therefrom to build the new system for which the U. F. A. stands.

A PRETTY WEDDING

A pretty home wedding which was of interest to a large circle of friends took place on the evening of August 11 when Anna Beagley, only daughter of Mr. and Mrs. E. M. Watson of 1564 St. George Street, Edmonton, was united in marriage to William Cecil Nicholson, younger son of the Rev. Samuel Nicholson and Mrs. Nicholson, of Bentley, Alberta.

Promptly at 6:30 o'clock to the strains of the wedding march played by Mrs. Alvin Miller, the bride entered the drawing room with her father, who gave her in marriage. The ceremony was performed by the Rev. W. A. Smith, the bridal couple standing beneath an arch decorated with pastel shaded sweet peas and fragrant stocks.

During the signing of the register Mrs. Audrey Stutchbury sang "In the Garden." After the ceremony a buffet supper was served. Mrs. Howard Stutchbury and Mrs. H. McTaggart presided over the supper table, which was centered with the bride's cake resting in a nest of pink and white tulle. The decorations on the table and throughout the dining room were carried out in pale pink, mauve and white. Miss Nora Nicholson, of Bentley, sister of the bridegroom, and Miss Marie Murphy served.

Later in the evening a reception was held from eight to ten o'clock, at which some one hundred guests extended their good wishes and congratulations to the happy couple. In the course of the evening Miss Stutchbury sang "I Love You Truly." Mr. and Mrs. Nicholson left on the 5:20 train for Jasper Park, where they will spend their honeymoon. On their return the happy couple will make their home on their farm at Bentley.

SUDDEN DEATH OF DR. W. LAIDLAW

Dr. William Charles Laidlaw, deputy minister of public health for the province of Alberta, and a well-known and respected citizen of Edmonton for many years, was found dead in bed at his home on Sunday morning. Heart failure is given as the cause of death. Dr. Laidlaw was born in Stayner, Ontario, 57 years ago, the son of John D. Laidlaw, now deceased, and Mrs. Annie L. Laidlaw, who survives him. Attending Upper Canada college and later the University of Toronto, he graduated from the latter institution with the degree of medical doctor in 1895.

The late Dr. Laidlaw saw considerable army service, having served in the South African war with "C" battery of the artillery forces, and as medical officer with the 4th brigade from 1914 in the last Great War, attaining the rank of Colonel.
